TP-monitor vendors spin Web features

Leon, Mark

InfoWorld v18n27 PP: 37 Jul 1, 1996

ISSN: 0199-6649 JRNL CODE: IFW

WORD COUNT: 424

ABSTRACT: NCR Corp. has developed enhancements to its Top End middleware that will let users deploy point-of-sale applications over the World Wide Web. Last week, NCR delivered a Java client to the Top End transaction-processing monitor, a Web-specific version of Top End designed to take advantage of the Internet and bypass weaknesses in standard Internet protocols. NCR has rewritten the Top End client code, which runs on PCs and sits inside automated teller machines and cash registers, as a set of Java class libraries.

...TEXT: middleware that will let users deploy point-of-sale applications over the World Wide Web.

TEXT:

Fifty-Eight Financial Institutions and 10 Solution Providers Working With  
**Microsoft** To Provide Online-Banking Services to Consumers

**Microsoft** Corp. has announced that 58 financial institutions have  
committed to offering online banking using **Microsoft** (R) Money through a  
group of leading banking-software vendors and banking-processing companies.  
"Clearly...

...the financial-services industry," said Lewis Levin, general manager of  
the desktop finance division at **Microsoft** . "We are gratified and excited  
by such a widespread show of support."

**Microsoft** first outlined its online-banking strategy at a March  
briefing for more than 200 bankers...

...choice or build in-house solutions to deliver services to customers via  
the Internet and **Microsoft** Money personal-finance software, the next  
version of which is scheduled to be available by...

...software products and back-end solutions.

To further help banks build their online-banking services, **Microsoft**  
is readying software-component technology for performing secure, ATM-like  
transactions using popular World Wide Web browsers, including **Microsoft**  
Internet Explorer and Netscape(TM) Navigator. These tools to facilitate  
browser-based banking are scheduled to be available by the end of the  
year. In addition, the **Microsoft** Windows NT(R) Server network operating  
system includes embedded support for Internet publishing, helping  
facilitate an end-to-end Internet banking solution.

"**Microsoft** is committed to developing and deploying the core  
technologies that financial institutions will require to...

...these institutions provide secure, branded services tailored to the  
needs of customers."

Levin will discuss **Microsoft** 's continuing role in online banking at  
a May 9 presentation to the Faulkner and...

...Zions Bank.

The bank processors and banking-software vendors committed to building  
connectivity services to **Microsoft** Money include Braun, Simmons & Co.;  
CFI Proservices; Checkfree Corp.; Edify; M&I Data Services; Online...

...ULTRADATA Corp.; Visa Interactive; and Intuit Services Corp. Several of  
these companies will also use **Microsoft** Windows NT Server as the  
foundation for their support of the OFC solution.

**Microsoft** Money makes the most common home-finance tasks easy. Its  
integrated services let users pay...

In consumer trials, users were...

...Software is planning a scaled-down version of  
Managing Your Money, said President Paul Harrison.

Microsoft , on the other hand, does not plan to offer a light  
version of its Money software, says Matthew Cone, Microsoft 's product  
manager for Money.

"We don't see a need ...for a client-server version. We think Money  
is sufficiently easy to use," Cone said.

Microsoft 's Strategy

But don't write Microsoft out of the light personal banking  
software market too quickly.

The Redmond Wash.-based company...

...version of Money if it sees market justification for  
such a product, Hardie told RDSN.

Microsoft 's options include offering a scaled-down version of  
Money or partnering with a company, such as HFN, to offer the  
transaction -oriented front end piece, Hardie said.

Additionally, Microsoft is looking to the Internet to help its  
partner banks capture what is believed to be the transaction-oriented  
mass market, Cone said.

With the Microsoft 's X controls, introduced in March, a bank or a  
vendor can embed transaction or...Quicken that will work as a plug-in  
application to Netscape Communication Corp.'s Navigator browser  
software. The interface is to be distributed free from Intuit's and  
Netscape's Web sites, Intuit said. (Matthew Cone, Microsoft , 206/882-

With Navio, just who does Netscape think it is kidding? (PCWeek Inside)  
(Company Operations)

Ratcliffe, Mitch

PC Week, v13, n36, pA8(1)

Sep 9, 1996

ISSN: 0740-1604 LANGUAGE: English RECORD TYPE: Fulltext; Abstract

WORD COUNT: 639 LINE COUNT: 00053

...ABSTRACT: Navio Communications subsidiary is charged with developing a stripped-down version of the Navigator Web browser for providing a platform for World Wide Web-like connectivity to consumer appliances such as TVs, telephones and ATM machines. Navio is nothing new, but an instrument to transfer technology from the parent company...

...IBM and Sega have signed on with Navio, but major third-party developers such as Sun, Macromedia and Progressive Networks have not signed on. Netscape's Navio strategy has come too late because third parties are more likely to use Java if they want to play a part in the consumer appliance market.

... the strategic implications of Navio are baldly anti-Internet. Netscape, in order to compete with Microsoft, is going to try to become Microsoft, delivering an "operating system" for World Wide Web-like connectivity in telephones, TVs and automatic...

...the market by aligning with Netscape, the allies announced last month would also have included Sun (maker of Java), Macromedia (maker of the Shockwave plug-in), Progressive Networks (RealAudio) and dozens...

...the compact portable applications market, they'll go with Java. That's the smart contra-Microsoft play. Sun's JavaSoft spin-out is at work on its own appliance OS. WebTV, Dabi and...

...to market that are incompatible with a lot of Web sites, particularly those using ActiveX.

Microsoft's "embrace and extend" approach to the Web, which has been a fabulous success, looks...

...you consider what Navio is poised to do to the "open" environment of the Web. Microsoft has a better pitch to potential partners than Netscape's "D-FENSE, D-FENSE" message at the Navio announcement. In fact, Microsoft's message has already worked with AOL, CompuServe and AT&T, which first licensed Navigator...

...then bought an Explorer license, too.

Finally, does Netscape's Navio spin-off make its Microsoft-like intimidation of developers any more innocent than Microsoft's? The answer is a resounding "No."

**Bankers Hear Microsoft's Money Strategy 03/19/96**

TEXT:

...A., 1996 MAR 19 (NB) -- Two hundred bankers and banking application software developers convened at **Microsoft Corp.** (NASDAQ:MSFT) headquarters earlier this week to hear the software company's strategy for

... Part of the agenda was devoted to **Microsoft** 's Open Financial Connectivity (OFC), a way to connect consumers using Money and the banks. **Microsoft** said the OFC specification enables banks and third party processors to build their own direct connection to **Microsoft Money** using Internet technology. According to **Microsoft**, OFC will let banks select the back-end architecture of their choice, whether that is...

...decide which online services they will provide their customers.

OFC complements the existing deal between **Microsoft** and Visa to provide online banking and bill payment services. That lets Visa banks deliver home banking services using **Microsoft Money** software through the Visa Interactive remote banking application. The Visa banks can also integrate their World Wide Web-based services into Visa Interactive or work directly with **Microsoft**.

**Microsoft** said the next release of Money, which is due late this summer, will allow banks...

...to connect to the bank's server.

The OFC standard is available for downloading from **Microsoft** 's Web page at <http://www.microsoft.com/industry/bank>, beginning this week.

Part of **Microsoft** 's overall banking strategy is to enable users to perform functions over the Internet that currently require you to visit an **ATM** (automatic teller machine). **Microsoft** said that, by the end of the year, customers will be able to use a Web browser, such as **Microsoft** 's Internet Explorer or Netscape Navigator, to access their bank's Web site to perform secure transactions.

A **Microsoft** spokesperson told Newsbytes that will allow users to perform banking functions without having to have...

...such as Money, which has the ability to track how money is spent in detail.

**Microsoft** also introduced the bankers to its newly organized desktop finance division, which the company said...

...financial services. The new division is headed by Lewis Levin, formerly general manager of the **Microsoft Excel** group at **Microsoft**. Excel is **Microsoft** 's popular spreadsheet program.

(Jim Mallory/19960319/Press contact: Donna O'Neill, Waggener Edstrom for **Microsoft**, 206-637-9097; Public contact: **Microsoft**, 206-882-8080 or 800-426-9400)

**MICROSOFT ONLINE-BANKING STRATEGY GAINS WIDE INDUSTRY SUPPORT**

With Microsoft To Provide Online-Banking Services to Consumers  
REDMOND, Wash., May 8 /PRNewswire/ -- Microsoft Corp. announced today that 58 financial institutions have committed to offering online banking using Microsoft (R) Money through a group of leading banking-software vendors and banking-processing companies.

"Clearly...

...the financial-services industry," said Lewis Levin, general manager of the desktop finance division at Microsoft . "We are gratified and excited by such a widespread show of support."

Microsoft first outlined its online-banking strategy at a March briefing for more than 200 bankers...

...choice or build in-house solutions to deliver services to customers via the Internet and Microsoft Money personal-finance software, the next version of which is scheduled to be available by...

...software products and back-end solutions.

To further help banks build their online-banking services, Microsoft is readying software-component technology for performing secure, ATM-like transactions using popular World Wide Web browsers, including Microsoft Internet Explorer and Netscape(TM) Navigator. These tools to facilitate browser-based banking are scheduled to be available by the end of the year. In addition, the Microsoft Windows NT(R) Server network operating system includes embedded support for Internet publishing, helping facilitate an end-to-end Internet banking solution.

"Microsoft is committed to developing and deploying the core technologies that financial institutions will require to...

...these institutions provide secure, branded services tailored to the needs of customers."

Levin will discuss Microsoft 's continuing role in online banking at a May 9 presentation to the Faulkner and...

...Zions Bank.

The bank processors and banking-software vendors committed to building connectivity services to Microsoft Money include Braun, Simmons & Co.; CFI Proservices; Checkfree Corp.; Edify; M&I Data Services; Online...

...ULTRADATA Corp.; Visa Interactive; and Intuit Services Corp. Several of these companies will also use Microsoft Windows NT Server as the foundation for their support of the OFC solution.

Microsoft Money makes the most common home-finance tasks easy. Its integrated services let users pay...

...manage their personal finances more quickly, conveniently and efficiently than ever before.

Founded in 1975, Microsoft (Nasdaq: MSFT) is the worldwide leader in software for personal computers. The company offers a...

...for people to take advantage of the full power of personal computing every day.

NOTE: Microsoft and Windows NT are either registered trademarks or trademarks of Microsoft Corp. in the United States and/or other countries. Netscape is a trademark of Netscape...

Computer Museum's "Networked Planet" For Kids & Adults.

Newsbytes, pNEW02130004

Feb 13, 1995

LANGUAGE: ENGLISH RECORD TYPE: FULLTEXT

WORD COUNT: 868 LINE COUNT: 00078

TEXT:

BOSTON, MASSACHUSETTS, U.S.A., 1995 FEB 13 (NB) -- For computerpros called upon to explain "what they do" by their kids, significant others, and parents, an outing to the Computer Museum's new "The Networked Planet" could be just the right ticket, suggested the museum's Gail Jennes. In a recent tour for Newsbytes, Jennes showed how the museum exhibit teaches folks about computers and networking while entertaining them with activities that run the gamut from the "Internet Sampler" to an international investments game, and from a "Hospital Kiosk" to sending electronic-mail to the White House. Four months after its official opening, the \$2 million permanent exhibit is getting a steady stream of visitors, including school groups of all grade levels, said Jennes, who is public relations director for the Boston-based Museum. Newsbytes saw how, in a series of steps, the exhibit turns abstract concepts into real, hands-on experiences. At the first stop along the way, you encounter telephones and fax machines, devices that are familiar to almost everyone -- but that often go unrecognized as computer interfaces. By the time you exit, you've looked at everything from the first IMP on the ARPAnet to the Stratus fault-tolerant computer and Sprint T1 fiber optic cables that supply the museum exhibit's Internet link. What's more, you've had the chance to do things like: "surf the net;" travel the globe on "a speeding bit of data;" view otherwise invisible numbers on your credit card via a mag-card reader; and utilize FAA (Federal Aeronautics Administration) data to tune in on incoming air traffic at an airport of your choice. The principal sponsor for "The Networked Planet" is Sprint, according to Jennes. Major sponsors include Apple, Hewlett-Packard, Novell, Nynex, Stratus, and SWIFT (Society for Worldwide Interbank Financial Telecommunications). The Computer Museum intends to evaluate the exhibit through a newly received grant from the National Science Foundation, one of the exhibit's major underwriters, she said. Over the coming year, museum officials will meet with experts from industry and academia to gain their input on future fine-tuning. The National Endowment for the Humanities is also a major underwriter. Like other visitors to "The Networked Planet," Newsbytes was issued a bar-coded key card enabling access to the interactive portions of the exhibit. Logging on to the network with the key card, Newsbytes was offered a choice of four online "Network Guides." Beatrice, for example, is a middle-aged book editor who worries over privacy issues, but is also grateful that a networked credit rating helped her to quickly secure a house loan. As Network Guide, Newsbytes selected Jessie, described by Jennes as a computer sophisticate, but also as a "free spirit." Newsbytes opted for English -- rather than Spanish, the other choice -- as the language in which Jessie's "speech" would be captioned. Jennes told Newsbytes that, at each interactive station, the visitor can discover the role that particular network plays in the Guide's life. The Guides also explain concepts such as "host computer," "server," "client," and "database." In the "Internet Sampler" exhibit area, Newsbytes witnessed how visitors can use a World Wide Web (WWW) browser to navigate through selected portions of the Internet, organized under point-and-click categories. While browsing, Newsbytes happened upon Individual Inc., with listings for Newsbytes News Network, Reuters, Associated Press, and other major news services. As of March, the museum will offer a WWW site permitting "anyone, anywhere" to try out the Internet Sampler, according to Jennes. The URL will be <http://www.net.org/>. Stratus is donating the WWW server. Also within "The Networked Planet," visitors can try out commercial online systems like CompuServe, America Online, and

eWorld, three other places where you can find Newsbytes News Network and additional online publications. During the tour, Newsbytes played several interactive computer games. "Telemedicine" lets you take on the role of a physician who "videoconferences" with a nurse practitioner and patient in a rural community to get information about the patient's temperature, cough, and heart rate. "Global Fund Manager" allows you to "invest" \$1 million in a simulated stock market, while seeing first-hand how global banking networks transfer large sums in various currencies around the world in minutes. At a "Home" kiosk, presented as a cozy living room, Newsbytes viewed a video on "the first wedding in cyberspace." Other video topics included telecommuting, telemedicine, and interactive TV and shopping. Just before entering the "Home" area, you come across a wall of seven surveillance monitors -- and behind that, a glass-enclosed area containing the Stratus computer and fiber optic cabling. The surveillance monitors point further to privacy issues, according to Jennes. "People realize that they have been 'watched' while moving through 'The Networked Planet,'" she told Newsbytes. Jennes indicated that kids, in particular, are excited to see the networking equipment. "They say, 'Oh, so that's what fiber optic cabling looks like.'" In other areas of the exhibit, you can: check your bank balance on an authentic ATM (automated teller machine) machine; view live financial data from the American and New York Stock Exchanges; track the national weather scene through up-to-the minute Nexrad feeds; and see how to adjust your keyboard, monitor, desk and light for a healthful work environment. Supporting sponsors for "The Networked Planet" include: Banyan; Chipcom; Cisco; Fannie Cox Foundation; Harvard Community Health Plan Foundation; Morgridge Family Foundation; Pisces Productions; Paul and Kathleen Severino; Sun Microsystems; Thomson Financial Services; and Wellfleet Communications. Abstract (Basic): US 5761071 A

The system (20) comprises a monitor (25) having a display screen (27). A micro-processor (30) coupled to the monitor controls the display operation. A browser software accesses and displays documents in response to user input. The graphical user interface of the browser software, comprises control of browser software and a document viewing data.

Minimum one image is positioned for display on the screen so as to mask the controls for the browser software. The positioned image thus renders the controls inaccessible to user to resists tampering with browser software.

ADVANTAGE - Enables to programme security control software to limit documents accessible to browser software. Updates image and security control software remotely in network setting.

Abstract (Basic): WO 9824041 A

The banking machine (12) includes a computer which reads indicia from a user's card corresponding to a system address, and connects the banking machine (12) to the home or foreign servers (20,22,24,26,28) designated by the system address through the Internet (16) or wide area network (18). The computer then exchanges HTML documents and TCP /IP messages with the servers to conduct a user's transaction.

The exchanged HTML documents and TCP /IP messages are processed in an HTML document handler, and are passed to a device application unit and device interfacing software unit, in order to maintain control operation of the user interface devices in the banking machine.

USE - Operating automated banking machine through connection to wide area network, and communicating using HTML and TCP /IP messages.

ADVANTAGE - Maintains high level of security.

				Div	ex		US 5742845

Abstract (Basic): US 5898838 A

NOVELTY - A downloader downloads protocol statements segregated by the segregator to input-output device and stores the segregated application statements for use by common gateway interface.

DETAILED DESCRIPTION - Integrated statement editing unit verifies syntax of integrated statements comprising open network protocol statements and application statements so that variable names in the protocol statements correspond with data fields in the application statement. The segregator segregates protocol statements from the application statements. The application statements are structured query language statements.

USE - For developing statements to support input-output operation on open network such as internet utilized by data transaction system including automatic teller machine, point of sale terminal, credit card terminal screen phone terminal, smart card reader, personal identification number pad, magnetic card swipe reader, printer.

ADVANTAGE - Permits consumers at remote place to order goods, so that merchant's risk and processing cost as well as card holder's exposure to fraud is reduced. Facilitates to communicate to processing center through open network with non- standard input-output devices. Supports electronic transaction or data compilation in secure manner

without undue limitation as to the devices with which communication is performed. CGI application correlates the database identifier contained in the returned forms of the internet protocol statements, with the file previously generated by the editor and provides re-integrated database command statements to database application thereby database is queried by or retrieve data from non-standard input device. Permits user to develop integrated forms with extended **HTML** language and standard query language database application statements thereby avoids need for generating and QL commands and **HTML** commands and carefully correlates data fields of two command to implement transaction between client and database.

DESCRIPTION OF DRAWING(S) - The figure depicts diagram of open network utilized by data transaction system.

Electronic data interchange (EDI) and IBM's Advantis network, Integrion Financial Network, IBM Global Network, and Systems Network Architecture (SNA) are part of a discussion of the slow adoption of electronic commerce, as explained via the experiences of three industries. EDI and World Wide Web sites are popular with banks, insurance companies, and manufacturers who want to enhance their ability to distribute products and services. However, Web and other technologies are moving ahead much faster than these three industries can or will implement them. One of the major concerns of these three industries is security, and therefore users are taking a methodical approach to security by implementing firewalls, encryption, and authentication. Home banking is available over the Web from major banks, but the banks themselves are not yet sure what opportunities are available with EC. ABN AMRO is building a private network infrastructure on IBM's Advantis network, and it is a member of Integrion Financial Network, which is the home equivalent of the automatic teller machine. It uses IBM Global Network and IP and SNA protocols, and will work with a browser-based infrastructure for home banking, electronic payments, and Internet access. Other institutions describe their slow progress toward EC and their ambivalent thoughts on implementation.

The Internet, computer-telephony integration, and wireless computing are defining how financial institutions interact with their clients. One of the biggest challenges in rolling out this new technology is integrating it with legacy systems. The very first virtual bank, with only a single physical branch, demonstrates much of the new technology. Because this

institution was founded with a focus on the Internet and virtual banking, it does not suffer from these integration issues. Through these these types of electronic services, bank customers can conduct transactions from any location at any time, and the bank does not have to invest in an expensive branch infrastructure. Earlier attempts at providing this level of convenience included the **automated teller machine** and telephone-based banking. Home banking is still largely proprietary, based on software distributed by the bank that allows customers to call directly into the bank's network. The Internet model, on the other hand, uses a **Web browser** as the interface and the public Internet as the connection. These scenarios typically are structured around a virtual private network which uses the Internet but still limits interoperability via a firewall and other security techniques.

Internet banking services from Security First Network Bank could mark the turning point at which Internet banking becomes a reality. The online bank allows any person with a PC, a modem, and a copy of Netscape Navigator to gain access to the World Wide Web (Web)-based bank. Security First Network Bank, a subsidiary of Cardinal Bancshares, licenses Five Paces' Virtual Bank Manager technology and hopes to use it to set an Internet banking standard. Security First and Five Paces say three layers of security are provided, including encryption technologies, firewalls and filtering routers, and trusted operations systems with access control. Netscape Navigator provides encryption 'armor,' and the trusted OS provides a vault for storing data that reaches the online bank. Users can do standard transactions, like viewing check copies and withdrawing funds from an **Automated Teller Machine**. Several major banks plan online packages for their customers.

World Wide Web (Web) service providers, new start-up companies that help businesses set up home pages, are a growing business segment. Some very large corporations seek their help to create 'online storefronts.' Additional staff is usually required to create Web-ready, HyperText Markup Language (HTML)-based versions of corporate documents. Therefore, a large credit card provider, for example, chose a San Jose, California Web service provider to create a home page with company background information, financial planning modules, and a planned interactive database of automated teller machines available to customers worldwide. Many large companies use a service that provides WAIS Server 2.0 server software; the firm specializes in determining specific target markets for its customers, which include Novell, Intel, and Pacific Bell.

ABSTRACT EP 949595 A2

A method and system for managing applications for a multi-function  
smartcard makes use of a resident master application and one or more  
monitor applications installed on the smartcard microcomputer to  
authorize downloading of new applications to the smartcard and to manage  
applications on the smartcard. New applications are installed on the  
smartcard using a security mechanism of the monitor application. When a  
new application is installed, it is provided, for example, with an  
operation key, cardholder information, and a digital certificate. The new  
application is registered in a software registry of the smartcard  
according to an object-oriented classification, a copy of the registry  
is stored in an electronic deposit box, and the electronic deposit box is  
updated with operational data for the new application. The new  
application selectively shares one or more objects with objects of other  
applications on the smartcard on a restricted or unrestricted basis.

ABSTRACT EP 935364 A2

This invention provides a network server platform forming part of a new local loop network architecture designed to overcome the limitations of current art local access loop technologies. This invention allows end users to seamlessly connect to the numerous disparate networks in order to access the multiplicity of services that these networks have to offer. The network server platform allows interconnection between networks with varying networking protocols. The network server platform is a key component of the new architecture and interacts to allow for easy and seamless integration with network components on both the local access level as well as the core network. The network server platform offers external networking capabilities to the local access network. As a result, the local access network terminates on the network server platform. The network server platform provides subscribers or end users the capabilities to access services from a multiplicity of disparate networks offering a variety of services.

ABSTRACT EP 935221 A2

    To a user terminal (5), one or plural kinds of biometric acquisition  
    devices (6-10) are connected, and in an authentication server (3), one or  
    plural authentication information acquisition software are stored  
    according to the user terminal (5) and/or a user. In accordance with the  
    operation of a prescribed authentication acquisition software  
    corresponding to the user terminal (5) and/or user, which is downloaded  
    from the authentication server (3) in authentication, biometric  
    information acquired by one or plural kinds of biometric acquisition  
    devices and/or keyed-in user discrimination information are used.

INTERNATIONAL PATENT CLASS: H04Q-011/04;

ABSTRACT EP 932321 A2

There is disclosed a selective ATM cell discard control, in which an ATM layer 1 receiving ATM cells belonging to a plurality of different packets 1 to 4, and determines to discard a cell belonging to a specified packet, and then, notifies to a physical layer a header information stored in the ATM cell belonging to the specified packet. A physical layer 2 compares a header of a received cell with the header information from the ATM layer, cell by cell, and discards the cell having the notified header information. Thus, an at-random property of cell loss is suppressed, thereby to prevent confusion of a network.

ABSTRACT EP 928123 A2

A new architecture capable of utilizing the existing twisted pair interface between the customer services equipment and the local office is used to provide a vast array of new services to customers. Using an intelligent services director (ISD) at the customer services equipment and a facilities management platform (FMP) at the local office, new services such as simultaneous, multiple calls (voice analog or digital), facsimile, Internet traffic and other data can be transmitted over the existing single twisted pair using xDSL transmission schemes. New services such as the implementation of videophone, utility metering, broadcasting, multicasting and other services can be implemented with this architecture.

The overall architecture of the system employs fault tolerant, transparent interaction of components and services. The new architecture supports a variety of standards for each level in the OSI layers and TCP/IP layers. The FMP connects electronically or optically to the PSTN, Internet backbone, or private Intranet.

ABSTRACT EP 893760 A2

A system including any number workstations, file servers, printers and other fixed devices coupled in a network, and a number of portable

devices carried by users and coupled to the network by infrared (IR) link. Each portable device emulates its user's personal satchel for documents: the device is programmed to receive transmit and store tokens. The tokens include context information (indicating the identity of a nearby device and the services (horizontal bar) such as send/receive, scanning, printing, faxing, converting (horizontal bar) that are available a that device) are distributed from one person to another by transmission of IR data packets. Once a network-connected computer, printer or multifunction device has received a token via IR transceiver associated with it, a search request can be derived from the token and document references (e.g. WWW URLs) corresponding to the token can be obtained via a search engine. For each URL obtained, the corresponding electronic document can be retrieved from a repository and displayed or printed. The portable device is preferably a handheld or wristwatch computer with a graphical display for enabling the user to transfer tokens, and the fixed devices preferably include a scanner/copier/printer having its own IR transceiver.

ABSTRACT EP 856812 A2

The present invention relates to an improved order fulfillment system. The system is provided with improved data entry system for selecting items for purchase by a customer, and an improved item collection terminal and order delivery system. The portable terminal to be used for collecting of items is provided with an audio as well as video presentation means which are used to provide assistance to the to

terminal user.

ABSTRACT EP 855649 A2

A computer system comprising: means for receiving work requests and  
dispatching them for execution within said computer system; means for  
processing said requests which have been received by said means for  
receiving and dispatching, to perform the requested work; and means for  
performing concurrency control with respect to concurrent requests, said  
means for performing concurrency control being located within said means  
for receiving and dispatching.

ABSTRACT EP 827092 A2

A technique for permitting the creation of multimedia titles in the  
form of flip books or stories comprising individual scenes includes  
simplified techniques for establishing navigation both internal and  
external navigation. The present invention provides a part or framework  
usable in a power tool environment which enables individual scenes within  
a multimedia story being created to be linked directly to parts or  
applications external to the multimedia story such that processing can  
jump directly from a scene to an external application or part.  
Additionally, the present invention provides improved navigation between  
scenes within a multimedia story and the ability to embed stories within  
individual scenes of the story.

INTERNATIONAL PATENT CLASS: G06F-001/00;

ABSTRACT EP 762261 A2

The authentication of users on networks is performed more easily and efficiently, as follows:

Authentication data sent from the application client 20 is relayed to a verification server 30 by the application server 10. The verification server 30 maintains a database of valid authentication data, against which it verifies received authentication data. Verification results are sent to the application server 10, which then processes users on the basis of these results. As a result, the configuration of application servers 10 is simplified. Verification servers or servers 30 can be used by a plurality of application servers 10, allowing for the efficient use of resources on a network.

ABSTRACT EP 727727 A2

A Document Card (DocuCard) (101; Fig. 1), suitably constructed for PCMCIA compliance, for storing documents (Fig. 4) and which is "content revealing". The DocuCard is a transportable unit having a nonvolatile storage means (203; Fig. 2) for storing information in a digital form, a control processor (201; Fig. 2) for processing user initiated functions; an I/O port (202; Fig. 2) for interfacing to external devices for reading and writing digital information (Figs 4, 5), and a user interface (601) for allowing a user to directly interact with the DocuCard. The user interface (601) on the DocuCard includes a display (603) for displaying lists of functions (Figs 12-15) and documents (Fig. 17) and information responsive to user invoked functions and a user input elements (606-610) for allowing a user to traverse the lists of functions and documents, as well as information generated responsive to an invoked function. The control processor (210; Fig. 2) of the present invention include features for controlling access to documents stored therein. (see image in original document)

ABSTRACT EP 479660 A2

A distributed computing system using a data communications network may have a number of service providers for a given service or remote procedure call. A client on the network makes reference to a name service to obtain the network address of one of these service providers. The name service maintains for each client or group of clients a configuration profile of the service providers in order to resolve the issue of selecting one of the several service providers when a request is made. A single configuration profile is a priority-ordered search list that maps from a service identifier (e.g., remote procedure call interface specification) into service provider (e.g., remote procedure call server) names. A configuration profile may include names for individual service providers, and/or named groups of service providers, and/or other configuration profiles. Configuration profiles are stored in a manner that makes them accessible throughout the distributed system, e.g., in the name service. Configuration profiles may be chained together by referencing other configuration profiles to provide a hierarchy of configuration profiles. (see image in original document)

ABSTRACT EP 856812 A2

The present invention relates to an improved order fulfillment system. The system is provided with improved data entry system for selecting items for purchase by a customer, and an improved item collection terminal and order delivery system. The portable terminal to be used for collecting of items is provided with an audio as well as video presentation means which are used to provide assistance to the terminal user.

Treatment: Applications (A)

Abstract: M. Coats and T. Mellon (ibid., June 1995), introduced the Coats-Mellon operational specification (CMOS), a methodology for defining user-based scenarios that represent a complete and accurate model of system behavior. For the most part, that article focused on the methodology's constructs and usage, using an automated teller machine example to show how the method works, producing diagrams that could be transitioned to an object-oriented and/or structured analysis model. In this article, we describe how CMOS has been used since then on real-world projects. The Mayer Receiver Project, for instance, is a hardware/software development project at the Motorola Space Systems and Services Division (SSSD). The purpose of the project is to provide secure communications. The Mayer Receiver is a specialized processor of message packets in a communications system. This small project currently includes 21,000 lines of integrated C++ and Java code and is being updated to add another 10,000 lines. The software controls the hardware to allow data input, then processes that data for dissemination. The software is controlled by a graphical user interface (GUI). The CMOS method was used to synthesize, analyze and validate the software requirements for the Mayer Receiver. (6 Refs)

Abstract: MHEG represents a new multimedia and hypermedia standard proposed by ISO/IEC. This paper presents a new software authoring environment based around MHEG-5 that offers users a vehicle for creating multimedia applications that can interact with external programs which involve intense computational tasks. MEMIS provides a linkage between a multimedia front-end and externally available computational processes. The paper provides a background to the development of the environment, by identifying the facilities offered by MHEG, discusses the efficacy offered by MHEG vs JAVA for multimedia development; and then covers the

development process and includes specific exemplars of the environment for managing multimedia applications which include (a) real-time signal processing embedded within a LabVIEW kernel, (b) automatic teller machines, (c) set top box, and (d) kiosks for Internet commerce that utilises MATLAB type calls. The results include system level architecture for multimedia implementation, and the timing requirements for such applications. (5 Refs)

Treatment: Applications (A)

Abstract: The goal of the etaCOM network is twofold. One to handle the applications to be exhibited and the other to demonstrate the network itself. Five technology tracks are demonstrated: ATM, Internet, wireless, multimedia, and client-server. The etaCOM network shows the following: (a) ATM interoperability; (b) temporary Internet services; (c) wireless Internet services; (d) automatic teller machines with video hookup; and (e) JAVA and etaCOM. Title: SNA reaches its crossroads (network updating)

Author(s): Costello, J.

Journal: Communications Networks vol.12, no.3 p.37-8, 40

Publication Date: March 1995 Country of Publication: UK

CODEN: CNETEQ ISSN: 0266-8009

Language: English Document Type: Journal Paper (JP)

Treatment: Practical (P)

Abstract: What to do with old SNA/Ethernet legacy systems is a matter of some debate for companies these days. Multinational organisations are looking to extend the life of their business-critical X.25 networks. At the same time, the PC population in these companies continues to grow, and new client/server applications are developed for the comparatively anarchic world of connectionless LAN traffic. There is a need to integrate the two environments, and deliver host-based SNA alongside LAN traffic. LAN emulation software enables PCs to access the mainframe via SNA gateways, while some organisations are adopting TCP / IP as the WAN "glue", encapsulating all but that native protocol over a router-based network of X.25, frame relay or leased lines. IBM is offering some interesting alternative networking solutions for today's business needs and is also gearing up for the ATM routing of the future. (0 Refs)

**Put your money in a mattress**

Internet World , August 1, 1999 , v5 n26 pl0, 1 Page(s)

ISSN: 1081-3071

Company Name: Bank One; Wingspan

Relates the author's experiences visiting the electronic banking sites of Bank One. Reports that the requirement to create an account name and password periodically freezes the browser. Mentions that the day after Bank One Online opened, the site suffered a server outage for a few days. Mentions that the regular banking activity of checking balance and account activity were difficult and slow. Explains that Wingspan offers fee-free checking, free bill payment service, and the ability to sort transactions by date, description, withdrawal and deposit. Explains that Wingspan customers can use Bank One's largest automated teller machine network, a selling point for opening a Bank One account. Presents a comparison of Wingspan and Bank One Online. **Bank uses Java to move online -- First Tennessee answers call for services on the 'net**

Gaudin, Sharon

Computerworld , September 8, 1997 , v31 n36 p45, 47, 2 Page(s)

ISSN: 0010-4841

Company Name: First Tennessee Bank

Reports on the use of Java to provide customers of the First Tennessee Bank with Internet-based online banking services. Explains that the bank is launching services to include online automated teller machine (ATM), check registration, bill paying, and financial advisory services. Claims that the Java-based system will provide the cross-platform capabilities that are necessary, and claims that the use of Java will put the bank ahead in the game. Also emphasizes the enhanced security provided by a Java-based application. Includes one photo. (kgh)

**Sun to link banks via Java -- Web road map to tie legacy apps, stock traders**

Hoffman, Thomas

Computerworld , June 23, 1997 , v31 n25 pl, 16, 2 Page(s)

ISSN: 0010-4841

Company Name: Sun Microsystems

Product Name: Sun Connect

Announces that Sun Microsystems, Inc. of Mountain View, CA will unveil the Sun Connect architecture, a set of middleware products that are designed to help banks and brokerages to tie all of their financial services together via the Web. Says that Sun Connect is based on Sun technologies such as Java and JavaBeans. Explains that the architecture relies on Sun's Java technology and open application programming interfaces (API) to connect legacy systems that support various customer delivery channels, including automated teller machines (ATM) and PC/Web-based stock-trading systems. Notes that a brokerage can use Sun Connect to deploy the applications across all its Web-enabled delivery channels. Concludes that Sun Connect may be tougher to sell to conservative banks, where security and reliability are extremely important. (smg)

Palm VII -- Got the whole world in your hand

Dosland, Brad

Maximum PC , August 1, 1999 , v4 n8 p87, 1 Page(s)

ISSN: 1088-5439

Company Name: 3Com

URL: <http://www.palm.net>

Product Name: 3Com Palm VII

Presents a very favorable review of the Palm VII (\$599) a personal digital assistant from 3Com (800). Relates that for \$25 a month, Palm VII owners can download 150K, roughly 750 screens of data from Bell South's wireless network. Says that it does not really access the Web, but uses a special service called "Web clipping," in which content providers must build a simple application that parses HTML data and Web scripts to snatch information, ranging from the nearest ATM machine to current stock prices, from thin air. Features 160 X 160 grayscale resolution, 2MB of memory, an IrDA port, a docking port, an 8,000bps wireless port, and a flip-up antenna which activates the service. Points out that it is missing the flip cover which protects the screen. Concludes that it is a dream come true that fulfills the promise of wireless data. Rates it nine on a scale of one to ten. Includes one photo, one product summary, one sidebar, one diagram, and a product source guide. (KMH)

...Mountain View, Calif.-based Netscape and Sun Microsystems, also of Mountain View.

Sun created a Java -based open API for smart cards that is being used by at least one vendor...

...only run on Sun's chip operating system, industry observers say.

"That's exactly what Java is thinking," says Tom Lesback, director of marketing and business development for smart cards and...

...Cross-Application

Schlumberger is the first smart card vendor to create a card with the Java system.

The Java virtual machine for smart cards includes several layers -- the operating system, which surrounds the microprocessor or chip, and the Java interpreter, that lies on top of the operating system and communicates between the applications and the operating system. The applications, of course, must be written in the Java API. The interpreter acts as a security layer preventing applications from commingling.

For example, loyalty...

...security for applications. Previous operating systems that were out there were not as good as Java , " he adds.

Additionally, the ...have made proprietary operating systems for the smart cards but there is no standard."

The Java system also will allow users to download and update applications remotely at automated teller machines or personal computers, for example, Lesback says.

Dominance of the Java system will be limited by several factors, including security and chip size, critics say.

Downloading...

...in Boelingen, Germany.

Additionally, today's chips do not have enough memory to hold the Java system, he says.

Standard cards have about 256 bytes of random access memory (RAM) but the Java system requires at least 512 bytes. Some upscale chips have 512 bytes of RAM but that is just enough for the Java system and leaves no room for security socket functions that may be used by the...

...them less attractive to consumers, Henn warns.

"For the current chips that are in use, [Java ] doesn't make sense. However, it makes sense for the new chips in development in...

Fujitsu-ICL Systems Inc has added TCP /IP support for its Fujitsu Series 7000 Automatic Teller Machines and Cash Dispensers so that banks can connect the terminals to an Ethernet that supports all branch systems using TCP /IP , and link the whole lot to the host mainframe over a single phone line.

TEXT:

They're really hammering away at Sun Microsystems Inc's Java and Netscape Communications Corp's Navigator at Princeton, and a team of Princeton University researchers said they have now discovered another security weakness in Java , described as the most serious flaw yet: the team told the Wall Street Journal that...

...the flaw could boobytrap a Web page on the Internet, and seize control of the browser software of any machine that logged into that page, and thereby start wreaking havoc on the user's computer - rather as thieves have used dummy automatic teller machines to record users' card details; Sun acknowledges that it is a serious bug, and says...  
...days; it notes that problems so far have been correctable details in the way the Java code is written, and not problems with its basic design.

**TWO HUNDRED BANKERS MEET AT MICROSOFT TO DISCUSS STRATEGY FOR EMBRACING  
THE INTERNET**  
TEXT:

**Microsoft** Announces Option for Direct Connection to **Microsoft Money** Via  
... Wash., March 18 /PRNewswire/ -- Two hundred worldwide bankers and  
banking solution providers convened today at **Microsoft Corp.** (Nasdaq:  
MSFT) to get an overview of **Microsoft's** strategy for helping financial  
institution(R) **Money** financial organizer. Continuing the theme of providing  
banks with choice and flexibility in building their online capabilities,  
**Microsoft** announced Open Financial Connectivity (OFC), which provides an  
easy, direct connection between consumers and their...  
...OFC specification enables banks and third-party processors to build  
their own direct connection to **Microsoft Money** using Internet technology.  
In addition, **Microsoft** discussed its recently formed desktop finance  
division, which was created to address the growing consumer...

...institutions in this growing area.

#### Direct Connectivity Gives Banks Choice and Flexibility

With this announcement, **Microsoft** delivers on its promise to provide  
banks choice and flexibility in offering online banking services via  
**Microsoft Money**. To date, banks have had limited choices, which has held  
back the wide adoption...

...outsourcing basis, and to decide which online services they will provide  
their customers.

OFC complements **Microsoft's** alliance with Visa to provide online  
banking and highly reliable bill payment services. "The...

...solution, integrate their Web-based services into the Visa Interactive  
offering, or work directly with **Microsoft** if they choose. Regardless of  
the interface, with proper security, Visa members can utilize the...  
...reliable and cost-effective VISA ePay bill-payment service for their  
customers."

#### How OFC Works

**Microsoft** designed OFC with input from financial institutions that  
wanted to deliver online banking services directly...

...is available to download at no cost from the World Wide Web at  
<http://www.microsoft.com/industry/bank/> starting today. This new offering  
is part of a wide range of technology solutions from **Microsoft** to help  
banks build complete online offerings for their customers.

#### New Technology to Help Build Web Browser-Based Home Banking

**Microsoft** also briefed banks on the development of new technology  
that will enable customers to perform ATM-like functions within a bank's  
Web site. By year-end, when this browser-based home-banking technology is  
scheduled to be available, customers will be able to use popular Web  
browsers, including **Microsoft Internet Explorer** and **NetScape(TM)**  
**Navigator**, to access their bank's Web site and perform secure transactions,  
not just browse marketing information. This browser-based home banking  
will take advantage of OFC, so the bank's technology investment will  
support customers using browsers or **Microsoft Money**.

Benefits of **Microsoft's** Internet Banking Strategy  
The most significant benefits of **Microsoft's** Internet banking

strategy to banks and consumers include the following:

- \* Financial institutions will find...

...may later choose to have the additional capability provided by financial management software, such as **Microsoft Money**.

"The new direct OFC option is an exciting and radical departure from previous business..."

...offer online banking services," said Pete Higgins, group vice president of applications and content at **Microsoft**. "We expect it to drive growth in this market significantly by allowing more consumers easy access to the conveniences of home banking from their financial institution."

#### **Microsoft Forms Desktop Finance Division**

To underscore its commitment to online banking and future desktop finance initiatives, **Microsoft** recently formed the desktop finance division. The new division is headed by **Microsoft** General Manager Lewis Levin, formerly general manager of the **Microsoft Excel** group at **Microsoft**. The mission of the desktop finance division is to help meet a wide range of...

...Levin reports to Pete Higgins and Nathan Myhrvold, group vice presidents of applications and content.

#### **Microsoft Offers Wide Range of Technologies for Home Banking**

**Microsoft** also offers a variety of Internet and server technologies that will help banks deliver online banking solutions. Key offerings include the Windows NT(R) Server network operating system and **Microsoft Internet Information Server**. **Microsoft Internet Information Server** is a powerful solution for publishing on the Internet, which incorporates significant...

...support as client applications "virtual branches" on the Internet, rich e-mail, proprietary applications and **Microsoft Money**. These products include the following:

- \* **Microsoft SQL Server(TM)**, a robust database management system that can be used for customer and product information. **Microsoft SQL Server** version 6. ... automatically format data in hypertext markup language (HTML) and send it to a Web server.
  - \* **Microsoft Exchange Server**, an electronic mail and messaging system that supports rich bank-customer communication
  - \* **SNA Server**, a gateway for integrating mainframe information
- Founded in 1975, **Microsoft** (Nasdaq: MSFT) is the worldwide leader in software for personal computers. The company offers a...

...for people to take advantage of the full power of personal computing every day.

NOTE: **Microsoft** and Windows NT are either registered trademarks or trademarks of **Microsoft Corp.** in the United States and/or other countries. NetScape is a trademark of NetScape...
